

SOLO PRODUCT FACT SHEET

SOLOPremier™ HSO Heel Spur Orthotic™

Standard Devices

Extension to the sulcus or the toes is available at an additional charge.

Description:

Pathology-specific orthotic designed for heel spur relief, the HSO provides support and control to help relieve plantar fascial strain while providing functional biomechanical control. Choose from 4 different heel pads.

An intrinsic heel pad has padding inserted into a round shell cutout. A heel pad is in the heel area only with no cutout. Carlton pads are on the device from calcaneus to distal. A horseshoe pad is around the perimeter of the heel area.

Indications:

Heel spurs, plantar fascial strain, chronic heel pain.

Width:

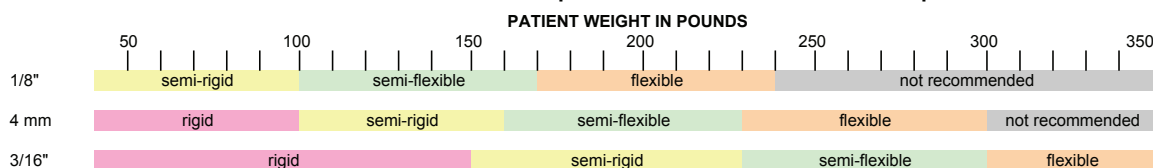

Standard width is bisect 1st. Other widths are also available.

Material:

Polypropylene. For a graphite shell, please see the Carboplast II fact sheet.

Posting:

Intrinsic forefoot and extrinsic rearfoot posts. Intrinsic rearfoot posts are available.
