

SOLO PRODUCT FACT SHEET

The Richie Dynamic Assist Brace[®]

Description:

The Richie Dynamic Assist Brace[®] is a custom articulated ankle-foot-orthosis with two spring-like hinges, medial and lateral, to provide up to 15 degrees of dorsiflexion of the foot at the ankle joint during the swing phase of gait.

INDICATIONS:

The Richie Dynamic Assist Brace[®] is indicated for the stabilization of the foot and ankle in patients with weakness of the dorsiflexor and evertor muscles of the lower leg.

This presentation may be the result of:

- Post CVA (stroke)
- Mild muscular dystrophy
- Charcot Marie tooth disease
- Post spinal cord surgery
- Diabetic neuropathy

BENEFITS:

- Control of first ray, midtarsal and subtalar joints
- Pure, sagittal plane motion with dorsiflexion assist
- Control of ankle inversion/eversion
- Control of tibial rotation on foot
- Optimal shoe fit
